

We have a small mountain village and weather alerts have never been required of our valley. Our budget is \$11,000 and we have not found EAS equipment for less than \$3,000. We would like a deferment for LPFM as we are just starting to build our station and need to spend for broadcast and recording equipment to meet the 18 month deadline.

We would like to find telephone program interrupt equipment so that the local police and fire dispatcher can go on the air for any local emergency.
